Aviation Fueling

#### Filter Separator Shut-Off Valve

The filter separator shut-off valve shall open and close via hydraulic signals from the interface float pilot.

The OCV 119 has a very specific purpose: to shut off the flow of fuel through a filter separator in the event of high water levels in the filter separator sump. To perform this task, it must operate in conjunction with one of the OCV 800 series interface float pilots.

### Certification & Compliance

NSF-ISO Quality System (9001)

FM Approved

Joint Certification Program

UFGS-33 52 43.14 Guide Specifications

CE (Conformité Européenne) Compliance

#### Features & Benefits

- High capacity pilot system provides quick closing
- Valve position indicator
- Can be maintained without removal from the line
- Factory tested

# Typical Applications

Commercial Airports

Military Bases

Bulk Fuel Storage Tanks

Truck On/Off Loading

Fuel Farms

Hydrant Systems

Mobile Refueling Equipment (Carts/Trucks/Tankers)

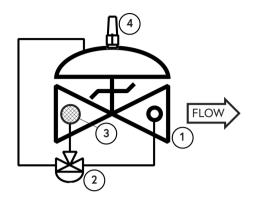

#### Filter Separator Control Valves

With little or no water in the sump of the filter separator, the float of the interface pilot is down. The float pilot routes vessel pressure to the bonnet of the three-way auxiliary pilot. This positions the three-port auxiliary pilot to connect the bonnet of the main valve downstream, allowing the valve to open.

With a high water level in the sump of the filter separator, the float of the interface pilot is up. The float pilot vents pressure from the bonnet of the three-way auxiliary pilot, shifting it to apply full inlet pressure to the bonnet of the main valve and drives the valve fully and tightly closed.

The OCV 119 consists of the following components, arranged as shown on the schematic diagram:

- 1 Model 65 Basic Control Valve (fail closed)
- 2 Model A224 Accelerator Pilot
- 3 Model 123 Inline Strainer
- 4 Model 155 Visual Indicator

The OCV 119 is normally sized to match the meter size; however, in no case should the maximum velocity exceed 20 ft/sec (metric: 6.10 meters/sec).

Resetting, maintenance and periodic testing instructions must be followed as described in detail in the applicable OCV IOM (Installation, Operation & Maintenance) Manual.

### Typical Materials

| Part                          | Standard Material   |
|-------------------------------|---|
| Body/Bonnet                   | Ductile Iron (epoxy coated), Carbon Steel (epoxy coated), Stainless Steel, Aluminum |
| Seat Ring                     | Stainless Steel, Bronze   |
| Stem                          | Stainless Steel, Monel  |
| Spring                        | Stainless Steel   |
| Diaphragm                     | Buna-N, Viton (Nylon reinforced)  |
| Seat Disc                     | Buna-N, Viton   |
| Pilot                         | Stainless Steel, Bronze   |
| Other Pilot System Components | Stainless Steel, Bronze/Brass   |
| Tubing & Fittings             | Stainless Steel, Copper/Brass   |

# Engineering Specifications

The filter separator shut-off valve shall be a single-seated, line pressure operated, diaphragm actuated, pilot controlled valve. The valve shall seal by means of a corrosion-resistant seat and a resilient, rectangular seat disc. These, and other parts, shall be replaceable without removing the valve from the line. The stem of the main valve shall be guided top and bottom by integral bushings. Alignment of the body, bonnet and diaphragm assembly shall be by precision dowel pins. The diaphragm shall not be used as a seating surface, nor shall the pistons be used as an operating means. The pilot system shall be furnished complete and installed on the main valve. It shall include an inline strainer, 3-way auxiliary pilot, and valve position indicator. The filter separator shut-off valve shall be operationally and hydrostatically tested prior to shipment. The main valve body and bonnet shall be ductile iron. All ferrous surfaces shall be coated with 4 mils of epoxy. The main valve seat ring shall be stainless steel. Elastomers (diaphragms, resilient seats and o-rings) shall be Buna-N. The auxiliary pilot, control line tubing, and fittings shall be stainless steel. The filter separator shut-off valve shall be suitable on <voltage> (see Technical Data section). The filter separator shut-off valve shall be suitable for pressures of <X to X> psi (see Pressure Table) at flow rates up to <X> gpm (see Flow Chart). The filter separator shut-off valve shall be an OCV 119, as manufactured by OCV, Tulsa, OK, USA.
