Truck/Rail Car Loading & Unloading Systems

### Rate of Flow/Solenoid Shut-Off Valve

# Description

The rate of flow/solenoid shut-off valve shall function to control or limit the flow rate, regardless of fluctuations in upstream or downstream pressure. The valve shall be equipped with a two-way solenoid valve that will allow the valve to open when energized/ de-energized. The OCV 120-1 has a wide range of applications anywhere the flow rate must be controlled or limited, combined with a need for an on/off electrical operation. Typical examples include:

- Pump systems
- Truck loading terminals

# Certification & ComplianceNSF-ISO Quality System (9001)Image: ComplianceABS Type ApprovalImage: ComplianceTechnical Standards & Safety AuthorityImage: ComplianceAmerican-Made: American Recovery & ReinvestmentImage: CompliancePressure Equipment Directive Certified 97/23/ECImage: ComplianceCE (Conformité Européenne) ComplianceImage: Cempliance

## > Features & Benefits

- Controls or limits flow to a predetermined rate
- Built-in orifice plate for sensing flow rate
- Electrically operated solenoid allows valve to open (control flow rate) or shut-off (close)
- Extra-sensitive differential pilot
- Flow rate is adjustable with single screw
- Adjustable response speed
- Can be maintained without removal from the line
- Factory tested and can be preset to your requirements

Truck/Rail Car Loading & Unloading Systems

# > Operation

A two-way solenoid acts as an override and when closed, causes the main valve to close. Opening the solenoid allows the normally open, spring loaded rate of flow control pilot to take over. The pilot, sensing the increased differential flow rate, works to close the pilot and main valve, whereas decreased differential works to open them. The net result is a constant modulating action of the pilot and main valve to hold the differential, hence the flow rate, constant. The pilot system is equipped with a needle valve that fine tunes the valve's response to the system variables. The solenoid can be supplied normally closed (energize to enable) or normally open (energize to close).

## Components

The OCV 120-1 consists of the following components, arranged as shown on the schematic diagram:

- 1 Model 65 Basic Valve (fail closed)
- 2 Orifice Plate
- 3 Model 2450 Rate of Flow Control Pilot
- 4 Model 451 Two-Way Solenoid Pilot
- 5 Model 126 Ejector
- 6 Model 141-2 Needle Valve
- 7 Model 123 Inline Strainer
- 8 Model 155 Visual Indicator (optional)

The OCV 120-1 is normally sized to match the meter size; however, in no case should the maximum velocity exceed 20 ft/sec (metric: 6.10 meters/sec).

Resetting, maintenance and periodic testing instructions must be followed as described in detail in the applicable OCV IOM (Installation, Operation & Maintenance) Manual.

## Typical Materials

Part	Standard Material
Body/Bonnet	Ductile Iron (epoxy coated), Carbon Steel (epoxy coated), Stainless Steel, Aluminum
Seat Ring	Stainless Steel, Bronze
Stem	Stainless Steel, Monel
Spring	Stainless Steel
Diaphragm	Buna-N, Viton (Nylon reinforced)
Seat Disc	Buna-N, Viton
Pilot	Stainless Steel, Bronze
Other Pilot System Components	Stainless Steel, Bronze/Brass
Tubing & Fittings	Stainless Steel, Copper/Brass

# Engineering Specifications

The rate of flow control/solenoid shut-off valve shall be a singleseated, line pressure operated, diaphragm actuated, pilot controlled globe valve. The valve shall seal by means of a corrosion-resistant seat and a resilient, rectangular seat disc. These, and other parts, shall be replaceable without removing the valve from the line. The stem of the main valve shall be guided top and bottom by integral bushings. Alignment of the body, bonnet and diaphragm assembly shall be by precision dowel pins. The diaphragm shall not be used as a seating surface, nor shall the pistons be used as an operating means. The orifice plate shall be integrally installed in the valve inlet flange. The pilot system shall be furnished complete, installed on the main valve and include an opening speed control, an inline strainer and solenoid valve. The rate of flow control/solenoid shut-off valve

shall be operationally and hydrostatically tested prior to shipment. The main valve body and bonnet shall be ductile iron. All ferrous surfaces shall be coated with 4 mils of epoxy. The main valve seat ring shall be stainless steel. Elastomers (diaphragms, resilient seats and O-rings) shall be Buna-N. The control pilot shall be stainless steel, while the opening speed control and control line tubing shall be stainless steel. The orifice plate shall also be stainless steel. The solenoid shall have an explosion-proof enclosure. The rate of flow control/solenoid shut-off valve shall be suitable for operation at <X> psi (see Pressure Table) at flow rates up to <X> gpm (see Flow Chart). The rate of flow control/solenoid shut-off valve shall be an OCV 120-1, as manufactured by OCV, Tulsa, OK, USA.
