# <u> ОСV</u> моdel 120-16

Special Application Valves

#### Rate of Flow/Solenoid Shut-Off/Check Valve

### Description

The rate of flow/solenoid shut-off/check valve shall function to (1) control or limit the flow rate, regardless of fluctuations in upstream or downstream pressure, (2) open and close via an electrical signal, and (3) close to prevent reverse flow.

The OCV 120-16 has a wide range of applications - anywhere the flow rate must be controlled or limited. Typical examples include:

- Pump systems
- Fuel metering systems

#### Features & Benefits

- Modulates as required to prevent flow rate from exceeding a predetermined maximum
- Opens and closes via discrete electrical signals
- Closes to prevent backflow in the event of pressure reversal
- Built-in orifice plate for sensing flow rate
- Extra-sensitive differential pilot
- Flow rate is adjustable with single screw
- Adjustable response speed
- Can be maintained without removal from the line
- Factory tested and can be preset to your requirements

# Typical Applications

Commercial Airports

Military Bases

Bulk Fuel Storage Tanks

Truck On/Off Loading

Fuel Farms

Hydrant Systems

Mobile Refueling Equipment (Carts/Trucks/Tankers)

Refineries

# > Operation

The rate of flow control pilot moves open or closed based on differential pressure created across the orifice plate. As the differential, hence the rate, increases, the pilot moves further closed, closing the main valve. As the differential decreases, the pilot moves further open, opening the main valve. The net result is a constant modulation of the pilot and main valve to hold the flow rate constant.

ELECTRICAL ON-OFF ACTION: When the coil of the solenoid pilot (4) is energized, the pilot is open, and the main valve opens under control of the rate of flow pilot, as described above. When the coil is deenergized, the pilot is closed, which forces the main valve to close.

CHECK VALVE ACTION: If downstream pressure should become higher than upstream pressure, the check valve (7B) opens to admit the higher downstream pressure to the main valve diaphragm chamber, forcing the valve fully and tightly closed. At the same time, the check valve (7A) closes to prevent any reverse flow through the pilot system.

# 

## Components

The OCV 120-16 consists of the following components, arranged as shown on the schematic diagram:

- 1 Model 65 Basic Control Valve
- 2 Orifice Plate
- 3 Model 2450 Rate of Flow Control Pilot
- 4 Model 451 Two-Way Solenoid Pilot, N.C.
- 5 Model 126 Ejector
- 6 Model 141-2 Flow Control Valve (opening speed control)
- 7 Model 141-1 Check Valve
- 8 Model 123 Inline Strainer
- 9 Model 155 Visual Indicator (optional)

The OCV 120-16 is normally sized to match the meter size; however, in no case should the maximum velocity exceed 20 ft/sec (metric: 6.10 meters/sec).

Resetting, maintenance and periodic testing instructions must be followed as described in detail in the applicable OCV IOM (Installation, Operation & Maintenance) Manual.

#### Typical Materials

Part	Standard Material
Body/Bonnet	Ductile Iron (epoxy coated), Carbon Steel (epoxy coated), Stainless Steel, Aluminum
Seat Ring	Stainless Steel, Bronze
Stem	Stainless Steel, Monel
Spring	Stainless Steel
Diaphragm	Buna-N, Viton (Nylon reinforced)
Seat Disc	Buna-N, Viton
Pilot	Stainless Steel, Bronze
Other Pilot System Components	Stainless Steel, Bronze/Brass
Tubing & Fittings	Stainless Steel, Copper/Brass

#### Engineering Specifications

The rate of flow/solenoid shut-off/check valve shall be a singleseated, line pressure operated, diaphragm actuated, pilot controlled valve. The valve shall seal by means of a corrosion-resistant seat and a resilient, rectangular seat disc. These, and other parts, shall be replaceable without removing the valve from the line. The stem of the main valve shall be guided top and bottom by integral bushings. Alignment of the body, bonnet and diaphragm assembly shall be by precision dowel pins. The diaphragm shall not be used as a seating surface, nor shall the pistons be used as an operating means. The pilot system shall be furnished complete and installed on the main valve. It shall include a needle valve speed control and an inline strainer. The rate of flow/solenoid shut-off/check valve shall be operationally and hydrostatically tested prior to shipment. The main valve body and bonnet shall be ductile iron. All ferrous surfaces shall be coated with 4 mils of epoxy. The main valve seat ring shall be stainless steel. Elastomers (diaphragms, resilient seats and o-rings) shall be Buna-N. The control pilot, opening speed control, control line tubing, and orifice plate shall be stainless steel. The rate of flow/solenoid shut-off/check valve shall be suitable on <voltage> (see Technical Data section). The rate of flow/solenoid shut-off/ check valve shall be suitable for pressures of <X to X> psi (see Pressure Table) at flow rates up to <X> gpm (see Flow Chart). The rate of flow/solenoid shut-off/check valve shall be an OCV 120-16, as manufactured by OCV, Tulsa, OK, USA.
