<u>COCV</u> Model 120

Aquestia Directing the Flow

Special Application Valves

Rate of Flow Control Valve

Description

The rate of flow control valve shall function to control or limit the flow rate, regardless of fluctuations in upstream or downstream pressure.

The OCV 120 has a wide range of applications: anywhere the flow rate must be controlled or limited. Typical examples include:

- Pump systems
- Fuel metering systems

Features & Benefits

- Controls or limits flow to a predetermined rate
- Built-in orifice plate for sensing flow rate _
- Extra-sensitive differential pilot _
- Flow rate is adjustable with single screw
- Adjustable response speed
- Can be maintained without removal from the line
- Factory tested and can be preset to your requirements

Typical Applications

Commercial Airports

Military Bases

Bulk Fuel Storage Tanks

Truck On/Off Loading

NSF-ISO Quality System (9001) ARS ABS Type Approval United States / Canada Joint Certification Program Certification Number 0073030 Joint Certification Program UFGS-33 52 43.14 Guide Specifications

Certification & Compliance

CE

CE (Conformité Européenne) Compliance

Fuel Farms

Hydrant Systems

Mobile Refueling Equipment (Carts/Trucks/Tankers)

Refineries

Special Application Valves Model 120

> Operation

The normally open, spring-loaded pilot, sensing the differential across the integral orifice plate, which is located in the valve inlet flange, responds to changes in differential and causes the main valve to do the same. Increased differential (flow rate) works to close the pilot and main valve, whereas decreased differential works to open them. The net result is a constant modulating action of the pilot and main valve to hold the differential, hence the flow rate, constant. The pilot system is equipped with a needle valve that fine tunes the valve's response to the system variables.

Components

The OCV 120 consists of the following components, arranged as shown on the schematic diagram:

- 1 Model 65 Basic Control Valve
- 2 Orifice Plate
- 3 Model 2450 Rate of Flow Control Pilot
- 4 Model 126 Ejector
- 5 Model 141-2 Needle Valve
- 6 Model 123 Inline Strainer
- 7 Model 155 Visual Indicator (optional)

The OCV 120 is normally sized to match the meter size; however, in no case should the maximum velocity exceed 20 ft/sec (metric: 6.10 meters/sec).

Resetting, maintenance and periodic testing instructions must be followed as described in detail in the applicable OCV IOM (Installation, Operation & Maintenance) Manual.

Typical Materials

Part	Standard Material
Body/Bonnet	Ductile Iron (epoxy coated), Carbon Steel (epoxy coated), Stainless Steel, Aluminum
Seat Ring	Stainless Steel, Bronze
Stem	Stainless Steel, Monel
Spring	Stainless Steel
Diaphragm	Buna-N, Viton (Nylon reinforced)
Seat Disc	Buna-N, Viton
Pilot	Stainless Steel, Bronze
Other Pilot System Components	Stainless Steel, Bronze/Brass
Tubing & Fittings	Stainless Steel, Copper/Brass

Engineering Specifications

The rate of flow control valve shall be a single-seated, line pressure operated, diaphragm actuated, pilot controlled valve. The valve shall seal by means of a corrosion-resistant seat and a resilient, rectangular seat disc. These, and other parts, shall be replaceable without removing the valve from the line. The stem of the main valve shall be guided top and bottom by integral bushings. Alignment of the body, bonnet and diaphragm assembly shall be by precision dowel pins. The diaphragm shall not be used as a seating surface, nor shall the pistons be used as an operating means. The pilot system shall be furnished complete and installed on the main valve. It shall include a needle valve speed control and an inline strainer. The rate of flow control valve shall be operationally and hydrostatically tested prior to shipment. The main valve body and bonnet shall be ductile iron. All ferrous surfaces shall be coated with 4 mils of epoxy. The main valve seat ring shall be stainless steel. Elastomers (diaphragms, resilient seats and o-rings) shall be Buna-N. The control pilot, opening speed control, and control line tubing shall be stainless steel. The rate of flow control valve shall be suitable on <voltage> (see Technical Data section). The rate of flow control valve shall be suitable for pressures of <X to X> psi (see Pressure Table) at flow rates up to <X> gpm (see Flow Chart). The rate of flow control valve shall be an OCV 120, as manufactured by OCV, Tulsa, OK, USA.
