

Special Application Valves

Fueling

Aviation Fueling

Pressure Reducing Valve

The pressure reducing valve shall function to reduce a higher upstream pressure to a constant, lower downstream pressure regardless of fluctuations in supply or demand.

The OCV 127-3 is applicable anywhere a pressure must be reduced to a manageable level in fuel delivery systems.

Certification & Compliance

NSF-ISO Quality System (9001)

ABS Type Approval

Joint Certification Program

CE (Conformité Européenne) Compliance

UFGS-33 52 43.14 Guide Specifications

Features & Benefits

- Reduces a higher inlet pressure to a lower outlet pressure
- Constant outlet pressure over wide flow range
- Pilot-operated main valve not subject to pressure fall off
- Outlet pressure is adjustable with single screw
- Adjustable opening/response speed
- Can be maintained without removal from the line
- Factory tested and can be preset to your requirements

Typical Applications

Commercial Airports

Military Bases

Bulk Fuel Storage Tanks

Truck On/Off Loading

Hydrant Systems

Mobile Refueling Equipment (Carts/Trucks/Tankers)

Refineries

Fuel Farms

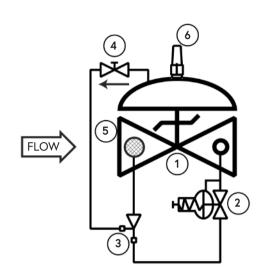

The normally open, spring-loaded pilot, sensing downstream pressure, responds to changes in pressure and causes the main valve to do the same. The net result is a constant modulating action of the pilot and main valve to hold the downstream pressure constant. The pilot system is equipped with an opening speed control that fine tunes the valve's response to the system variables.

The OCV 127-3 consists of the following components, arranged as shown on the schematic diagram:

- 1 Model 65 Basic Control Valve
- 2 Model 1340 Pressure Reducing Pilot
- 3 Model 126 Ejector
- 4 Model 141-3* Flow Control Valve (Opening Speed Control)
 *NOTE: Model 141-2 Needle Valve used on sizes 1-1/4"-3"
- 5 Model 123 Inline Strainer
- 6 Model 155 Visual Indicator (optional)

The OCV 127-3 is normally sized to match the meter size; however, in no case should the maximum velocity exceed 20 ft/sec (metric: 6.10 meters/sec).

Resetting, maintenance and periodic testing instructions must be followed as described in detail in the applicable OCV IOM (Installation, Operation & Maintenance) Manual.

Typical Materials

| Part | Standard Material |
|-------------------------------|---|
| Body/Bonnet | Ductile Iron (epoxy coated), Carbon Steel (epoxy coated), Stainless Steel, Aluminum |
| Seat Ring | Stainless Steel, Bronze |
| Stem | Stainless Steel, Monel |
| Spring | Stainless Steel |
| Diaphragm | Buna-N, Viton (Nylon reinforced) |
| Seat Disc | Buna-N, Viton |
| Pilot | Stainless Steel, Bronze |
| Other Pilot System Components | Stainless Steel, Bronze/Brass |
| Tubing & Fittings | Stainless Steel, Copper/Brass |

Engineering Specifications

The pressure reducing valve shall be a single-seated, line pressure operated, diaphragm actuated, pilot controlled valve. The valve shall seal by means of a corrosion-resistant seat and a resilient, rectangular seat disc. These, and other parts, shall be replaceable without removing the valve from the line. The stem of the main valve shall be guided top and bottom by integral bushings. Alignment of the body, bonnet and diaphragm assembly shall be by precision dowel pins. The diaphragm shall not be used as a seating surface, nor shall the pistons be used as an operating means. The pilot system shall be furnished complete and installed on the main valve. It shall include an opening speed control and an inline strainer. The pressure reducing valve shall be operationally and hydrostatically tested prior to shipment. The main valve body and bonnet shall be ductile iron. All ferrous surfaces shall be coated with 4 mils of epoxy. The main valve seat ring shall be stainless steel. Elastomers (diaphragms, resilient seats and o-rings) shall be Buna-N. The control pilot, opening speed control, and control line tubing shall be stainless steel. The pressure reducing valve shall be suitable on <voltage> (see Technical Data section). The pressure reducing valve shall be suitable for pressures of <X to X> psi (see Pressure Table) at flow rates up to <X> gpm (see Flow Chart). The pressure reducing valve shall be an OCV 127-3, as manufactured by OCV, Tulsa, OK, USA.
