

## Series 65

### UL Listed Basic Untrimmed Valve Model: 65FC

The series 65 control valves are automatic, hydraulically actuated, diaphragm operated, rigid seal globe and angle pattern valves. These valves are designed for use in fire protection applications, including deluge, pressure control, water, foam and seawater fire protection systems. The valves consist of three major components: the body, the bonnet and the internal diaphragm assembly.

Model 65FC

### CERTIFICATION & COMPLIANCE

- Drip-tight shut off to ANSI FCI 70-2 VI seat leakage class
- Simple and reliable construction
- Easy installation & maintenance
- High-grade construction materials
- Reliable pressure control
- Low pressure losses at high flow rates

### OPTIONAL FEATURES

- Local or remote reset
- Electric, pneumatic & electro-pneumatic control trims
- Explosion proof solenoids & trim accessories
- Seawater & foam concentrate services

## OPERATION

**Valve Closed**

When line pressure from the valve inlet is applied to the cover chamber, pressurizing the diaphragm, the valve is closed drip-tight.

**Valve Open**

When cover chamber pressure is vented, the valve shifts to the fully open position.

**Valve Modulating**

The valve is between fully open and closed positions. The valve's control pilot modulates the pressure in the cover chamber, positioning the valve to control the desired pressure or flow. OCV pilot systems provide accurate control in a wide range of performance requirements.

The Model 65FC consists of the following components, arranged as shown on the schematic diagram:

- [1] **Model 65FC Basic Control Valve:** a UL Listed, hydraulically operated, diaphragm actuated globe valve which closes with an elastomer-on-metal seal.
- [2] **Model 155 Visual Indicator Assembly:** (optional) provides indication of valve position at a glance.

Resetting, maintenance and periodic testing instructions must be followed as described in detail in the applicable OCV IOM (Installation, Operation & Maintenance) Manual.
