

▲ **Model 8000VM shown**

VALVE FEATURES

- ▶ Operates automatically off line pressure.
- ▶ Heavy-duty, nylon-reinforced diaphragm.
- ▶ Rectangular-shaped, soft seat seal provides drip-tight Class VI closure.
- ▶ Diaphragm assembly guided top and bottom.
- ▶ Throttling seat retainer for flow and pressure stability.
- ▶ Easily maintained without removal from the line.
- ▶ Replaceable seat ring.
- ▶ Alignment pins assure proper reassembly after maintenance.
- ▶ Factory tested.
- ▶ Serial numbered and registered to facilitate replacement parts and factory support.

The OCV Series 8000 float control valves are designed to maintain a desired level in a tank or reservoir by opening for filling the tank when fluid is below the high level point and closing tightly when the desired level is reached.

SERIES FEATURES

- ▶ The 8000 is a non-modulating valve; either full open or full closed. It is available in two basic configurations:
 1. Model 8000, with the float pilot provided separate from the main valve for remote mounting. This configuration is used when the fill line is located at the bottom of the tank.
 2. Model 8000VM, with the float pilot mounted on the main valve. This configuration is typically used when the fill line is located at the top of the tank.
- ▶ All Series 8000 valves include an OCV Model 65 Basic Valve assembly and a Model 814 three-way rotary float pilot. For faster operation, valves 8" and larger also include a Model 3600 three-way auxiliary pilot.

BOTTOM FILL PILOT REMOTE MOUNTED

TOP FILL PILOT VALVE MOUNTED

VALVE OPERATION

VALVES 1 1/4" - 6"

When the float is in the "down" position, the pilot port "C" is connected to the "E" port. This vents the diaphragm chamber of the main valve, allowing it to open. The tank fills through the valve until the desired high level is reached; i.e., the float reaches the "up" position. At this point, a connection is made in the pilot from "S" to "C" ports. This applies inlet pressure to the diaphragm chamber of the main valve, causing it to go fully closed.

ITEM	PART NO.	QTY	DESCRIPTION
1	65	1	BASIC VALVE ASSEMBLY
2	814	1	THREE-WAY FLOAT PILOT
3	159	1	Y-STRAINER
4	141-4	1	ISOLATION BALL VALVE
5	3600	1	THREE-WAY AUXILIARY PILOT

VALVES 8" - Larger

The above description applies except that the float pilot alternately vents or pressurizes the diaphragm chamber of the three-way auxiliary pilot. In relay fashion, the auxiliary pilot then vents or pressurizes the diaphragm chamber of the main valve.

 4. Float Rod, SS
 5. Adjustable Stop Collars, SS
 6. Pilot Control, SS
 7. Float, SS

FLOAT PILOT INSTALLATION

To protect the float ball from wave action within the tank, it is highly recommended that the float be installed in a stilling well. This is especially critical if the fill line exits into the top of the tank.

VALVE INSTALLATION

For maximum efficiency, the OCV control valve should be mounted in a piping system so that the valve bonnet (cover) is in the top position. Other positions are acceptable but may not allow the valve to function to its fullest and safest potential. In particular, please consult the factory before installing 8" and larger valves, or any valves with a limit switch, in positions other than described.

Model 814 Float Pilot

The OCV Model 814 Float Pilot is a float-actuated, three-port, rotary disc pilot designed to provide on-off action to an OCV Model 65 main valve.

It features the following:

- (1) Integral mounting plate to facilitate installation within the tank.
- (2) Designed for mounting above the fluid level to prevent a cross-connection.
- (3) High and low level points are independently adjustable, allowing for optimum tank cycling.

The basic principle of operation of the 814 pilot is quite straightforward. There are three sets of ported passages in the pilot body, and matching sets in the lapped rotary disc.

- (A) With the float "down", the "S" port is blocked, and the "C" port is connected to "E" port. This allows the pilot to vent the diaphragm chamber of a main valve or auxiliary pilot, thus opening the main valve.
- (B) With the float "up", the "E" port is blocked, and "S" is connected to "C" port. This allows the pilot to pressurize the diaphragm chamber of the main valve or auxiliary pilot, thus closing the main valve.

SIZING CONSIDERATIONS

Sizing of Series 8000 Valves - Float Valves

While most Model 8000 valves are line sized, there are two factors that should be checked. Maximum flow rate should not exceed 25 ft/sec, in other words don't use a valve that is too small. At the same time, you don't want the valve so large that when it opens, it drops the system pressure so low that there is not enough pressure to close the valve when high level is reached. Our ValveMaster selection and sizing software covers this in detail. However, if you do not have access to the software on our web site, sizing within the flow limitations shown in the following table should result in satisfactory operation.

If the flow rate for a given valve will fall below the minimum shown, you might consider adding a pressure sustaining feature (Model 8000-3).

SIZE	1 1/4"	1 1/2"	2	2 1/2"	3"	4"	6"	8"	10"	12"	14"	16"	24"
Min. flow, gpm	14	23	50	75	115	200	450	780	1225	1750	2100	2750	6250
Max. flow, gpm	115	160	260	370	570	1000	2250	3900	6150	8700	10,500	13,800	31,300

Global performance. **Personal** touch.

VALVE SELECTION GUIDE

By combining various control pilots, multiple valve functions can be performed on a single Series 8000 Float Control Valve. To find the combination function valve, select the desired features and then the model number. This chart shows only a sample of those most often specified valves. Consult the factory for specific data on the model you selected.

Combination valves can often reduce or eliminate other equipment. Example: If the system requires a Pressure Sustaining function, the sustaining feature can be added as a function of the Float Valve, Model 8000-3.

Feature	8000	8000-1	8000-2	8000-3	8000-13	8000-23	8000VM	8000VM-1	8000VM-2	8000VM-3	8000VM-13	8000VM-23	Definition
Float Pilot Mounted On Valve							X	X	X	X	X		Pilot mounted on valve vs. remote mount
Solenoid Override (Energize-to-Open)		X			X			X			X		Solenoid, when deenergized, overrides float pilot to close valve
Solenoid Override (Energize-to-Close)			X			X			X			X	Solenoid, when energized, overrides float pilot to close valve
Pressure Sustaining				X	X	X				X	X	X	Maintains minimum valve inlet pressure

ABOUT YOUR VALVE

OCV Control Valves was founded more than 60 years ago with a vision and commitment to quality and reliability. From modest beginnings, the company has grown to be a global leader just a half century later. In fact, OCV Valves can be found in some capacity in nearly every country around the world from fire protection systems in Malaysia to aircraft fueling systems in Africa and from oil refineries in Russia to water supply systems in the USA and Canada. You will also find our valves in irrigation systems in Europe, South America and the Middle East.

The original foundation on which the company was built allows our team of professionals to not only provide the service required to be a worldwide supplier, but more importantly the opportunity to afford the personal touch necessary to be each of our customers' best partner. Simply stated, we take pride in all that we do.

Committed to the work they do, our employees average over 15 years of service. This wealth of knowledge allows us to provide quality engineering, expert support, exacting control and the know-how to create valves known for their long life.

Being ISO 9001 certified means we are committed to a quality assurance program. Our policy is to supply each customer with consistent quality products and ensure that the process is right every time. Our valves meet and exceed industry standards around the world. Including approvals by:

Check individual models for availability.

All valves are not created equal. OCV Control Valves proves that day in and day out. We stand behind our valves and are ready to serve your needs.

*GROOVED END NOT AVAILABLE IN DN32

For maximum efficiency, the OCV control valve should be mounted in a piping system so that the valve bonnet (cover) is in the top position. Other positions are acceptable but may not allow the valve to function to its fullest and safest potential. In particular, please consult the factory before installing 8" and larger valves, or any valves with a limit switch, in positions other than described. Space should be taken into consideration when mounting valves and their pilot systems.

A routine inspection & maintenance program should be established and conducted yearly by a qualified technician. Consult our factory @ 1-888-628-8258 for parts and service.
