CV Model 115-25

Truck Fill Stand Control Valves

Two-Stage Preset Valve

Description

The two-stage preset valve shall open in one stage and close in two stages based on signals from the preset register.

The OCV 115-25 is specifically designed for fuel loading systems and performs the following functions:

- Electrical opening full flow delivery
- Two-stage shutdown

Features & Benefits

- Opens on signal from preset register
- Closes in two stages based on signals from preset register (mechanical or electronic)
- Can be maintained without removal from the line
- Explosion-proof pre-wired junction box available
- Two-stage opening (timer) available
- Factory tested _

CV Model 115-25

Truck Fill Stand Control Valves

> Operation

On start-up, SW1 and SW2 both close, energizing both solenoids in the preset (2A and 2B), allowing the main valve to open and admit full flow. A predetermined number of gallons before the end of the loading run, SW1 opens to remove power from solenoid 2A, causing the main valve to close, but allowing low flow through solenoid 2B. At the conclusion of the load, SW2 opens, deenergizing and closing solenoid 2B, stopping all flow.

Components

The OCV 115-25 consists of the following components, arranged as shown on the schematic diagram:

- 1 Model 65 Basic Control Valve (fail closed)
- 2A Two-Way Solenoid Pilot, N.C. (high flow)
- 2B Two-Way Solenoid Pilot, N.C. (low flow)
- 3 Ejector
- 4 Needle Valve
- 5 Inline Strainer
- 6 Visual Indicator

The OCV 115-25 is normally sized to match the meter size; however, in no case should the maximum velocity exceed 20 ft/sec (metric: 6.10 meters/sec).

Resetting, maintenance and periodic testing instructions must be followed as described in detail in the applicable OCV IOM (Installation, Operation & Maintenance) Manual.

Typical Materials

Part	Standard Material
Body/Bonnet	Ductile Iron (epoxy coated), Carbon Steel (epoxy coated), Stainless Steel, Aluminum
Seat Ring	Stainless Steel, Bronze
Stem	Stainless Steel, Monel
Spring	Stainless Steel
Diaphragm	Buna-N, Viton (Nylon reinforced)
Seat Disc	Buna-N, Viton
Pilot	Stainless Steel, Bronze
Other Pilot System Components	Stainless Steel, Bronze/Brass
Tubing & Fittings	Stainless Steel, Copper/Brass

Engineering Specifications

The two-stage preset valve shall be a single-seated, line pressure operated, diaphragm actuated, pilot controlled valve. The valve shall seal by means of a corrosion-resistant seat and a resilient, rectangular seat disc. These, and other parts, shall be replaceable without removing the valve from the line. The stem of the main valve shall be guided top and bottom by integral bushings. Alignment of the body, bonnet and diaphragm assembly shall be by precision dowel pins. The diaphragm shall not be used as a seating surface, nor shall the pistons be used as an operating means. The pilot system shall be furnished complete and installed on the main valve. It shall include 2 solenoid pilots, a needle valve, and an inline strainer. The two-stage preset valve shall be operationally and hydrostatically tested prior to shipment. The main valve body and bonnet shall be ductile iron. All ferrous surfaces shall be coated with 4 mils of epoxy. The main valve seat ring shall be stainless steel. Elastomers (diaphragms, resilient seats and o-rings) shall be Buna-N. The solenoid pilots, the needle valve, and the control line tubing shall be stainless steel. The solenoid enclosure shall be explosion-proof and suitable for operation on <voltage> (see Technical Data section). The two-stage preset valve shall be suitable for pressures of <X to X> psi (see Pressure Table) at flow rates up to <X> gpm (see Flow Chart). The two-stage preset valve shall be an OCV 115-25, as manufactured by OCV, Tulsa, OK, USA.
