

DE\PORV-MR

Pneumatically Actuated, Manual Reset
Deluge Valve

Pneumatically actuated, manual reset, pilot controlled deluge/pre-action valve, actuated by the pipeline pressure. The valve is closed in its normal, set position and opens when the pneumatic pressure drops in a gas pressurized pilot line, tripping a hydraulic relay. The valve must be manually reset following automatic actuation. An emergency manual release valve is fitted as standard.

CERTIFICATION & COMPLIANCE

- ANSI FCI 70-2 Class VI seat leakage class
- UL listed under VLFT category
- Fire tested to EN ISO 6182-5:2006 (2" - 6" only)
- Lloyd's & ABS approvals

* General representation of valve

FEATURES & BENEFITS

- High pressure (PN25/375psi), high flow deluge systems
- Automatic or manual emergency actuation
- Hazardous, flammable & explosion classified area fire suppression
- Superior design featuring exceptionally low pressure losses at high flow rates
- Low lifelong maintenance costs due to straightforward design
- Applicable for fresh or brackish water, seawater & foam
- Out of box fully assembled & tested valves
- Factory trimmed for vertical or horizontal installations without modification
- Extensive valve & trim materials selection and corrosion protection coating

TYPICAL APPLICATIONS

Automatic or Manual Actuated
Fire Suppression Systems

Petrochemical, Oil & Gas
Installations

Tunnels

Power Generation, Transformer
& Transmission Plants

Flammable Storage

Hangars & Airport Terminals

Onshore / Offshore

Mining

OPERATION

The basic control valve [1] used in this deluge system is a direct sealing elastomeric diaphragm, hydraulically operated control valve engineered specifically for fire protection systems.

In the standby position, the deluge valve is held closed by the upstream water pressure, trapped in the valve's control chamber. The water pressure enters the control chamber through the priming line ball valve [2], a Y-type strainer [3], a check valve [4] and a DMR (Manual Reset Latching Device) [5].

Under fire conditions, one (or more) of the automatic sprinklers on the dry (pneumatically pressurized) pilot line burst. The pressure in the relay valve [9] drops, causing it to open and allowing the water to drain from the deluge valve's control chamber. The deluge valve opens instantly and allows water to flow into the pipeline and through the open sprinklers over the protected area.

Manual emergency actuation is enabled by opening the emergency manual activation valve [6]. The deluge valve opens instantly and allows water to flow into the pipeline and through the open sprinklers over the protected area.

When the valve trips open, the DMR isolates the control chamber from the upstream pressure source. Reconnecting the upstream pressure to enable the deluge valve to close can only be achieved by pressing the DMR's knob.

Standby Position

Pneumatically Actuated

Manually Actuated

Reset to Close

Resetting, maintenance and periodic testing instructions must be followed as described in detail in the applicable OCV IOM (Installation, Operation & Maintenance) Manual.

TYPICAL MATERIALS

ID	Description	Standard	POG ⁽¹⁾ Applications
1	Valve Body	See Series 100 Engineering Data ⁽²⁾	
2	Ball Valve	Bronze, Stainless Steel Ball	Stainless Steel 316
3	Y-Type Strainer	Bronze, Stainless Steel Screen	Stainless Steel 316
4	Check Valve	Bronze	Stainless Steel 316
5	DMR (Manual Reset Latching Device)	Brass	Stainless Steel 316
6	Manual Emergency Valve	Bronze	Stainless Steel 316
7	Drip Valve	Brass	Stainless Steel 316
8	Pressure Gauge	Stainless Steel	Stainless Steel 316
9	66-2UL Relay	Brass	Stainless Steel 316

TYPICAL INSTALLATION

- 1** Pneumatically Actuated,
Manual Reset Deluge Valve
- 2** PPCS (Pneumatic Pressure Control
System)
- 3** DMR (Latching Manual Reset Device)
- 4** Dry (Pneumatically Pressurized) Pilot Line

TECHNICAL DATA

Temperature:

- Media up to 80°C = 176°F
- Elastomers suitable for extreme climates available upon request

Sizes:

- UL Listed Sizes: Model 68: 2"-10"
- Straight Flow: 2"-24"

End Connections:

- Flanged:
ISO-PN16 & ISO-PN25
ANSI B16.42 & B16.5 Class #150 and #300
Additional options available upon request
- Grooved:
Sizes: 2"-8"

Pressure Rating:

- 250 psi for Class #150
- 375 psi for Class #300

Body and Cover Material:

- Ductile Iron
- Cast Steel
- Stainless Steel
- NAB

Trim Material:

- Bronze/Brass - Copper
- Stainless Steel
- Monel

Optional Components:

- Spring
- Position Indicator
- Pressure Switch
- Alarm Test Trim
- Upstream Drain Valve
- Limit/Proximity Switch

Items to Specify:

- Electrical features other than standard (24VDC, IP65/NEMA4)
- If explosion proof accessories are required such as solenoids, pressure switches, etc., please define classification
- Control trim material other than standard
- Required standards, certifications and approvals

ENGINEERING SPECIFICATIONS

The deluge valve shall be hydraulically operated, direct elastomeric diaphragm-seal, single chamber weir type. The valve shall consist of three major components: the body, the cover and the diaphragm assembly. The diaphragm assembly shall be the only moving part. The diaphragm forms a sealed control chamber in the upper portion of the valve, separating operating pressure from line pressure. Packing glands, stuffing boxes and dynamic O-ring seals are not permitted and there shall not be shafts, discs, bearings or pistons operating the valve. No hourglass shaped disc retainers shall be permitted, and no V-type, U-type or other slotted type disc guides shall be used. The valve shall contain a nylon reinforced rubber diaphragm, elastic & resilient through its entire surface without vulcanized radial seals and/or reinforcements. The diaphragm assembly shall not be guided by any shafts or bearings and shall not be in close contact with other valve parts except for its sealing surface. The deluge valve shall be fully trimmed, hydrostatically and operationally tested at the factory. Maintenance, disassembly and reassembly of all the valve's components shall be made possible on-site and in-line, without the need to remove the valve from the line. Main valve body and bonnet standard material shall be Ductile Iron or Cast Steel. Main valve body and bonnet surfaces shall include a fire red epoxy coating. Other materials and coatings available upon request. The deluge valve shall be a Model 68 DE/PORV-MR, UL Listed under VLFT category, as manufactured by OCV Fluid Solutions, Tulsa, OK, USA.
