Thermal Expansion Relief Valve

Description

This is a pressure relief valve that is installed downstream of a pressure reducing valve and is located in the distribution piping in a fire protection system. If the pressure in the distribution piping rises above the relief valve's set point, the OCV 1330FC opens and relieves the excess pressure, thus preventing damage.

Certification & Compliance

UL Listed (Control Number 39TZ)

Features & Benefits

- Normally closed, increasing inlet pressure opens valve
- UL listed spring range of 20-175 psi
- Local sense line (self contained sense loop)
- Simple adjustment
