

△ OCV Model 68-710

Accessories

Pressure Sustaining/Relief 2-Way Pilot Valve

Description

A 2-Way, diaphragm actuated, spring-loaded, pressure sustaining/ relief pilot valve, applicable for service on pressure sustaining/relief valve trims. It modulates to maintain a steady, pre-set pressure, upstream of the valve's location. As upstream pressure rises above the set value, the 68-710 opens to allow water flow between its 4 and 3 ports, relieving the water from the valve's control chamber and causing the valve to open. As upstream pressure falls below the set value, the 68-710 throttles, restricting the flow out of the valve's control chamber, limiting the valve's opening or causing it to close (if necessary).

Certification & Compliance

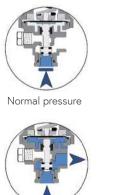

UL Listed (when installed on OCV control valves)

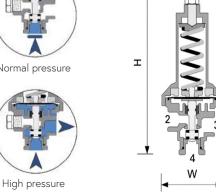

Features & Benefits

- Wide regulation range (can be set up to 33 bar/480psi)
- Large water passages allow high flow capacity and fast reaction
- Accurate and easy to adjust
- Simple design and maximal dependability

Operation

	General				
	Pressure Rating	40 bar / 580psi			
	Pressure Adjustment Range	0.5 -33 bar / 7-4			
	Fluid Temperature	80°C max / 175°F
