Deluge Valves

#### Hydraulically Actuated, Anti-Columning Deluge Valve

## Description

Hydraulically actuated, pilot controlled deluge/pre-action valve, actuated by the pipeline pressure. The valve is closed in its normal, set position and opens when the hydraulic pressure drops in a pressurized pilot line, tripping a hydraulic relay. An emergency manual release valve is fitted as standard. Also available with manual reset: DE\HRV-MR.

#### Certification & Compliance

UL Listed under VLFT category

ABS Type Approval

Lloyd's Register Approval

ANSI FCI 70-2 Class VI seat leakage class

Fire tested to EN ISO 6182-5:2006 (2"-6" only)

## Typical Applications

Automatic or Manual Actuated Fire Suppression Systems

Petrochemical, Oil & Gas Installations

Tunnels

Power Generation, Transformer & Transmission Plants

Flamm

Hange

Onsho

Mining

#### Features & Benefits

- High pressure (PN25/375psi), high flow deluge systems
- Automatic or local manual emergency actuation
- Hazardous, flammable & explosion classified area fire suppression
- Superior design featuring exceptionally low pressure losses at high flow rates
- Low lifelong maintenance costs due to straightforward design
- Applicable for fresh or brackish water, seawater & foam
- Out of box fully assembled & tested valves
- Factory trimmed for vertical & horizontal installations without modification
- Extensive valve & trim materials selection and corrosion protection coating

#### > Operation

The basic control valve [1] used in this deluge system is a direct sealing elastomeric diaphragm, hydraulically operated control valve engineered specifically for fire protection systems.

In the standby position, the deluge value is held closed by the upstream water pressure, trapped in the value's control chamber. The water pressure enters the control chamber through the priming line ball value [2], a Y-Type strainer [3], a check value [4] and a T-restrictor [5].

Under fire conditions, one (or more) of the automatic sprinklers on the wet pilot line burst. The pressure in the relay valve [9] drops, causing it to open and allowing the water to drain from the deluge valve's control chamber. The deluge valve opens instantly and allows water to flow into the pipeline and through the open sprinklers over the protected area.

Manual emergency actuation is enabled by opening the emergency manual activation valve [6]. The deluge valve opens instantly and allows water to flow into the pipeline and through the open sprinklers over the protected area.

Hydraulically Actuated

Manually Actuated

Resetting, maintenance, and periodic testing instructions must be followed as described in detail in the applicable OCV IOM (Installation, Operation & Maintenance) Manual.

#### Components & Typical Materials

The OCV 68 DE\HRV consists of the following components, arranged as shown on the schematic diagram below.

ID	Part	Standard Material	POG (1) Applications	
1	Valve Body	See OCV S100 Engineering Data (2)		
2	Ball Valve	Bronze, Stainless Steel Ball	Stainless Steel 316	
3	Y-Type Strainer	Bronze, Stainless Steel Screen	Stainless Steel 316	
4	Check Valve	Bronze	Stainless Steel 316	
5	T Restrictor	Brass	Stainless Steel 316	
6	Manual Emergency Valve	Bronze	Stainless Steel 316	
7	Drip Valve	Brass	Stainless Steel 316	
8	Pressure Gauge (optional)	Stainless Steel	Stainless Steel 316	
9	66-2UL Relay	Brass	Stainless Steel 316	

(1) Petrochemical, Oil & Gas

(2) Refer to materials selection guidelines, Engineering Data - Materials: Ductile Iron A-536 65-45-12; Cast Steel A-216 WCB; Cast Steel A-352 LCB; Austenitic Stainless Steel A-351/CF8M; Super Duplex 2507; Nickel-Aluminum-Bronze B-148 UNS C95800

#### Typical Installation

The typical installation of the OCV 68 DE\HRV is as shown:

- 1 Hydraulically Actuated, Anti Columning Deluge Valve
- 2 Pilot Line Test Ball Valve
- 3 Wet Pilot Line

## Engineering Specifications

The deluge valve shall be hydraulically operated, direct elastomeric diaphragm-seal, single chamber weir type. The valve shall consist of three major components: the body, the cover and the diaphragm assembly. The diaphragm assembly shall be the only moving part. The diaphragm forms a sealed control chamber in the upper portion of the valve, separating operating pressure from line pressure. Packing glands, stuffing boxes and dynamic O-ring seals are not permitted and there shall not be shafts, discs, bearings or pistons operating the valve. No hourglass shaped disc retainers shall be permitted, and no V-type, U-type or other slotted type disc guides shall be used. The valve shall contain a nylon reinforced rubber diaphragm, elastic & resilient through its entire surface without vulcanized radial seals

and/or reinforcements. The diaphragm assembly shall not be guided by any shafts or bearings and shall not be in close contact with other valve parts except for its sealing surface. The deluge valve shall be fully trimmed, hydrostatically and operationally tested at the factory. Maintenance, disassembly and reassembly of all the valve's components shall be made possible on-site and in-line, without the need to remove the valve from the line. Main valve body and bonnet standard material shall be ductile iron or cast steel. Main valve body and bonnet surfaces shall include a fire red epoxy coating. Other materials and coatings available upon request. The deluge valve shall be an OCV 68 DE\HRV, UL Listed under VLFT category, as manufactured by OCV, an Aquestia Ltd. brand, Tulsa, OK, USA.

Aquestia Ltd. reserves the right to make product changes without prior notice. To ensure receiving updated information on parts specifications, please contact us at usa@aquestia.com. Aquestia Ltd. shall not be held liable for any errors. All rights reserved.
