

Fuel Storage Valves

Model 8101

General representation

Fueling

Terminal Services

High Level Shut-Off Valve

Description

The high level shut-off valve shall be installed on the inlet line to the tank and shall close when the high level is reached. The high level shut-off valve shall include a simple, two-way, non-adjustable float pilot to be installed in the tank at the desired tank level and be connected to the main valve by two, customer-installed sense lines. The OCV 8101 is applicable anywhere it is necessary to automatically control the high level in storage tanks where the float pilot can be mounted inside the tank.

Certification & Compliance

NSF-ISO Quality System (9001)

ABS Type Approval

Technical Standards & Safety Authority

American-Made: American Recovery & Reinvestment

Pressure Equipment Directive Certified 97/23/EC

CE (Conformité Européenne) Compliance

Features & Benefits

- Allows tank filling and shuts off on high level
- Remote-mounted float pilot (inside tank)
- Two field-installed lines between valve and float pilot
- Manual tester available on float pilot
- Can be maintained without removal from the line
- Adjustable response speed
- Factory tested and can be pre-set to your requirements

Typical Applications

Metering Systems

Loading Terminals

Storage Tanks

Truck/Rail Car Loading & Unloading Systems

Operation

The OCV 8101 is designed for tank fill only. A rotary, float-activated pilot controls the position of the main valve. With the float in the full down position, the pilot is wide open, along with the main valve. As the float begins to rise, the pilot begins to restrict flow, causing the main valve to throttle further closed. When fluid level raises the float to the full up position, flow is blocked and the main valve is closed.

Components

The OCV 8101 consists of the following components, arranged as shown on the schematic diagram:

- 1 Model 65 Basic Valve (fail closed)
- 2 Two-Way Float Pilot
- 3 Ejector
- 4 Needle Valve
- 5 Inline Strainer
- 6 Isolation Ball Valve
- 7 Visual Indicator

The OCV 8101 is normally sized to match the meter size; however, in no case should the maximum velocity exceed 20 ft/sec (metric: 6.10 meters/sec).

Resetting, maintenance and periodic testing instructions must be followed as described in detail in the applicable OCV IOM (Installation, Operation & Maintenance) Manual.

Typical Materials

Part	Standard Material
Body/Bonnet	Ductile Iron (epoxy coated), Carbon Steel (epoxy coated), Stainless Steel, Aluminum
Seat Ring	Stainless Steel, Bronze
Stem	Stainless Steel, Monel
Spring	Stainless Steel
Diaphragm	Buna-N, Viton (Nylon reinforced)
Seat Disc	Buna-N, Viton
Pilot	Stainless Steel, Bronze
Other Pilot System Components	Stainless Steel, Bronze/Brass
Tubing & Fittings	Stainless Steel, Copper/Brass

Engineering Specifications

The high level shut-off valve shall be a single-seated, line pressure operated, diaphragm actuated, pilot controlled globe valve. The valve shall seal by means of a corrosion-resistant seat and a resilient, rectangular seat disc. These, and other parts, shall be replaceable without removing the valve from the line. The stem of the main valve shall be guided top and bottom by integral bushings. Alignment of the body, bonnet and diaphragm assembly shall be by precision dowel pins. The diaphragm shall not be used as a seating surface, nor shall the pistons be used as an operating means. The pilot system shall include a speed control, an inline strainer, and an isolation ball valve. The float pilot shall be furnished separately for remote mounting in the tank. The high level shut-off valve shall be

operationally and hydrostatically tested prior to shipment. The main valve body and bonnet shall be ductile iron. All ferrous surfaces shall be coated with 4 mils of epoxy. The main valve seat ring shall be stainless steel. Elastomers (diaphragms, resilient seats and o-rings) shall be Buna-N. The float pilot shall be stainless steel, as shall the 5" spherical float, pilot system accessories, and control line tubing. The high level shut-off valve shall be suitable on <voltage> (see Technical Data section). The high level shut-off valve shall be suitable for pressures of <X to X> psi (see Pressure Table) at flow rates up to <X> gpm (see Flow Chart). The high level shut-off valve shall be an OCV 8101, as manufactured by OCV, Tulsa, OK, USA.
