<u>COCV</u> Model 110

Differential Control/Air Check Valves

Differential Pressure Control Valve

Description

The differential control valve shall function to operate on a differential between two pressure points, where a decreased differential shall cause the valve to close. The valve operates on/off based on the pressure difference between two points in a system. Typical examples include:

- LPG metering systems to prevent flashing
- Metering systems as an air eliminator shut-off valve

> Features & Benefits

- Valve opens on an increasing differential; closes on a decreasing differential
- Operates over a wide flow range
- Pressure differential is adjustable with a single screw
- Can be maintained without removal from the line
- Adjustable response speed
- Factory tested and can be pre-set to your requirements

Loading Terminals

Storage Tanks

Truck/Rail Car Loading & Unloading Systems

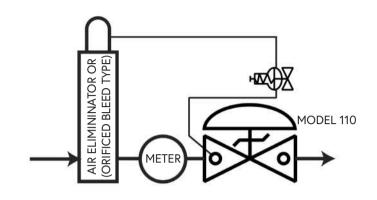

Differential Control/Air Check Valves

Aquestia

> Operation

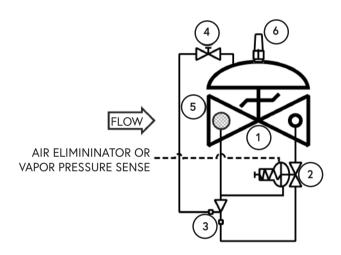

The normally closed, spring-loaded pilot senses two pressure points: the high pressure sense in the main valve inlet and the low pressure sense that is field-connected to an air eliminator head (liquid fuel) or vapor pressure bulb (LPG system). As long as the differential pressure is above the set point, the pilot is open, along with the main valve. If the differential drops below the set point, the pilot and main valve will close. In this manner, the valve acts to prevent the passage of air and/or flashing liquid through the meter. The pilot system is equipped with a needle valve response speed control.

Components

The OCV 115-3 consists of the following components, arranged as shown on the schematic diagram:

- 1 Model 65 Basic Valve (fail closed)
- 2 Model 1356 Differential Control Pilot
- 3 Model 126 Ejector
- 4 Model 141-2 Needle Valve
- 5 Model 123 Inline Strainer
- 6 Model 155 Visual Indicator (optional)

The OCV 110 is normally sized to match the meter size; however, in no case should the maximum velocity exceed 20 ft/sec (metric: 6.10 meters/sec).

Resetting, maintenance and periodic testing instructions must be followed as described in detail in the applicable OCV IOM (Installation, Operation & Maintenance) Manual.

Typical Materials

| Part | Standard Material |
|-------------------------------|---|
| Body/Bonnet | Ductile Iron (epoxy coated), Carbon Steel (epoxy coated), Stainless Steel, Aluminum |
| Seat Ring | Stainless Steel, Bronze |
| Stem | Stainless Steel, Monel |
| Spring | Stainless Steel |
| Diaphragm | Buna-N, Viton (Nylon reinforced) |
| Seat Disc | Buna-N, Viton |
| Pilot | Stainless Steel, Bronze |
| Other Pilot System Components | Stainless Steel, Bronze/Brass |
| Tubing & Fittings | Stainless Steel, Copper/Brass |

Engineering Specifications

The differential control valve shall be a single-seated, line pressure operated, diaphragm actuated, pilot controlled globe valve. The valve shall seal by means of a corrosion-resistant seat and a resilient, rectangular seat disc. These, and other parts, shall be replaceable without removing the valve from the line. The stem of the main valve shall be guided top and bottom by integral bushings. Alignment of the body, bonnet and diaphragm assembly shall be by precision dowel pins. The diaphragm shall not be used as a seating surface, nor shall the pistons be used as an operating means. The pilot system shall be furnished complete and installed on the main valve. It shall include a needle valve speed control and inline strainer. The differential control valve shall be operationally and hydrostatically tested prior to shipment. The main valve body and bonnet shall be ductile iron. All ferrous surfaces shall be coated with 4 mils of epoxy. The main valve seat ring shall be stainless steel. Elastomers (diaphragms, resilient seats and o-rings) shall be Buna-N. The control pilots, speed control, tubing and fittings shall be stainless steel. The differential control valve shall be suitable for operation on <voltage> (see Technical Data section). The differential control valve shall be suitable for pressures of <X to X> psi (see Pressure Table) at flow rates up to <X> gpm (see Flow Chart). The differential control valve shall be an OCV 110, as manufactured by OCV, Tulsa, OK, USA.
