CV Model 120-75

Truck/Rail Car Loading & Unloading Systems

Two-Stage Preset Valve

Description

The two-stage preset valve shall open in one stage and close in two stages based on signals from the preset register. The OCV 120-7S is specifically designed for fuel loading systems and performs the following functions:

- Electrical opening full flow delivery
- Rate of Flow Control valve will limit flow from exceeding a _ maximum flow rate during high flow filling process
- Two-Stage shutdown

Certification & Compliance NSF-ISO Quality System (9001) ABS Type Approval ABS 55 Technical Standards & Safety Authority American-Made: American Recovery & Reinvestment PED Pressure Equipment Directive Certified 2014/68/EU

CE (Conformité Européenne) Compliance

CE

Features & Benefits

- Opens on signal from preset register
- Limits flow rate to meter capacity (adjustable)
- Extra sensitive differential pilot
- Can be controlled by mechanical or electronic presets
- Adjustable flow setting for 2nd stage dwell _
- Factory tested
- Junction box options are available, with explosion proof ratings
- Two-stage electronic opening options are available
- Standard Class 1 Div 1 (Optional Class I Div 2, ATEX, IECEX)

CV Model 120-75

Truck/Rail Car Loading & Unloading Systems

> Operation

The OCV 120-7S control valve opens to fill the system at a constant flow rate. Near the end of the load, the valve rapidly closes down in 2 stages to top off the reservoir:

Opening, Full Flow: The main valve (1) opens to supply a constant flow rate when the preset controller energizes the solenoid (3). The rate of flow pilot (4), sensing differential across the integral orifice plate, will modulate the main valve to prevent the flow rate from exceeding the predetermined maximum. The needle valve (5) is adjusted for optimum performance of the pilot (4).

HI output applies power and opens the N.C. solenoid, activating flow control function.

1st Stage Shutdown: The main valve begins closing at a predetermined number of gallons before the end of the load.

 ${\rm HI}$ output removes power and closes the N.C. solenoid. ${\rm HI}$ output remains off through load.

LO output sends power to the limit switch. The N.O. solenoid remains open (de-energized) because limit switch contact is open.

Low (Dwell) Flow: The main valve closes far enough to trip the limit switch contact and holds this position for low flow filling.

LO output sends power through limit switch contact and closes the N.O. solenoid. This hydraulically locks the valve into a low flow mode.

Final Closure: The main valve will close fully when the load is complete.

LO output removes power from limit switch and N.O. solenoid. The N.O. solenoid opens and allows the main valve to close fully.

PRESET BOX

Components

The OCV 120-7S consists of the following components, arranged as shown on the schematic diagram:

- 1 Model 65 Basic Valve (fail closed)
- 2 Two-Way Solenoid Pilot, N.O.
- 3 Two-Way Solenoid Pilot, N.C.
- 4 Model 2450 Rate of Flow Control Pilot
- 5 Needle Valve (closing speed)
- 6 Inline Strainer
- 7 Limit Switch (low flow setting)

The OCV 120-7S is normally sized to match the meter size; however, in no case should the maximum velocity exceed 20 ft/sec (metric: 6.10 meters/sec).

Resetting, maintenance and periodic testing instructions must be followed as described in detail in the applicable OCV IOM (Installation, Operation & Maintenance) Manual.

Typical Materials

Part	Standard Material
Body/Bonnet	Ductile Iron (epoxy coated), Carbon Steel (epoxy coated), Stainless Steel, Aluminum
Seat Ring	Stainless Steel, Bronze
Stem	Stainless Steel, Monel
Spring	Stainless Steel
Diaphragm	Buna-N, Viton (Nylon reinforced)
Seat Disc	Buna-N, Viton
Pilot	Stainless Steel, Bronze
Other Pilot System Components	Stainless Steel, Bronze/Brass
Tubing & Fittings	Stainless Steel, Copper/Brass

Engineering Specifications

The two-stage preset valve shall be a single-seated, line pressure operated, diaphragm actuated, pilot controlled globe valve. The valve shall seal by means of a corrosion-resistant seat and a resilient, rectangular seat disc. These, and other parts, shall be replaceable without removing the valve from the line. The stem of the main valve shall be guided top and bottom by integral bushings. Alignment of the body, bonnet and diaphragm assembly shall be by precision dowel pins. The diaphragm shall not be used as a seating surface, nor shall the pistons be used as an operating means. The orifice plate shall be integrally installed in the valve inlet flange. The pilot system shall be furnished complete, installed on the main valve and include two solenoid pilots, a needle valve and an inline strainer. The twostage preset valve shall be operationally and hydrostatically tested prior to shipment. The main valve body and bonnet shall be ductile iron. All ferrous surfaces shall be coated with 4 mils of epoxy. The main valve seat ring shall be stainless steel. Elastomers (diaphragms, resilient seats and o-rings) shall be Buna-N. Solenoid pilots shall be stainless steel, as shall the needle valve and control line tubing. The solenoid and limit switch enclosure shall be explosion-proof and suitable for operation on <voltage> (see Technical Data section). The two-stage preset valve shall be suitable for operation at <X> psi (see Pressure Table) at flow rates up to <X> gpm (see Flow Chart). The two-stage preset valve shall be an OCV 120-7S, as manufactured by OCV, Tulsa, OK, USA.
